

BRITISH ALLERGY FOUNDATION (BAF) SEAL OF APPROVAL

Cleanaer™ is the only battery operated product to hold the BAF seal of approval for air treatment.

Cleanaer is the only truly silent product to hold the BAF seal of approval for air treatment.

Cleanaer is endorsed by the British Allergy Foundation / Allergy UK for the removal of house dust mite and cat allergen. Cleanaer has been proven to precipitate and lock-down airborne allergens from the breathable air and specifically to reduce cat and dust mite allergen. Once removed, they do not return.

* Independent trials at the Medical Entomology Centre and National Pollen and Aerobiology Research Unit

The results are based on a three day test carried out in a room representing a medium sized bedroom. Periodically the soft furnishings were disturbed to see if the allergen returned into the breathable air. This represented a person entering and using the room.

Cleanaer units worked well at not only removing the particulate matter from the air but also ensuring that it doesn't return; thus making your home or office a much cleaner and safer environment to live and work in.

Cleanaer is endorsed for a room up to 17 cubic meters as this is the size of room the test was carried out in. However Cleanaer units will obviously also works well in rooms much larger in size and can fragrance a room up to 152m³ in size.
