## Technology in action

### How it works:

Cleanaer devices protect the room by releasing millions of Liquid-ions in short bursts every few minutes, 24 hours a day.

These Liquid-ions are too small for you to see and float around on the natural air currents patrolling for unwanted particles.

The Liquid-ions attract airborne contaminants and combine with them in the air, bringing them to the surface and rendering them inactive.

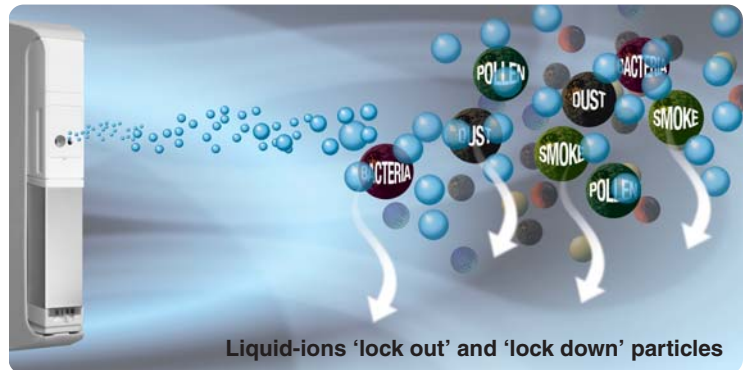

The continuous release of Liquid-ions ensures a constant flow to always protect against the introduction of new particles, even from a sneeze! Once the particles are removed from the air, tests have proven that they remain locked down and do not recirculate.

The air currents in the room move everywhere. The Liquid-ions therefore penetrate every part of the room and can fragrance an area up to 152m<sup>3</sup> (63.3m<sup>2</sup> x 2.4m high) in size.

Due to the size of the Liquid-ions, gravity has little effect. This means that they stay airborne for a significant period of time.

This unique technology constantly clears the air in your environment, protecting the room against new particles and microbes as soon as they are introduced.

Cleanaer technology is revolutionising the way we protect ourselves, our families, our customers, our employees and our business.

## Cleanaer™ from Atrium Innovation

### A new, patented technology:

- Can be supplied with a tamper-proof wall bracket for secure use in public environments
- Available in 4 different cartridges:
  - 1 Pure Allergy (fragrance free)
  - 2 Pure Scent
  - 3 French Lavender
  - 4 Tea Tree Oil
- Each cartridge lasts for one month
- Fragrances may vary from country to country.

## Cleanaer work in progress

Cleanaer products are continually undergoing testing to find new applications and improve claims about this innovative technology's effectiveness.
